The present sequence represents the capsular gene cluster of Streptococcus suis serotype 2. The genes in this cluster are involved in polysaccharide biosynthesis of capsular components and antigens. The proteins are involved in regulation (CpsA), chain length determination (CpsB, CpsC), export (CpsC), and biosynthesis (CpsE, CpsF, CpsG, CpsH, CpsK). The capsule confers bacterium resistance to complement-mediated opsonophagocytosis. The gene cluster is used as a source of probes and primers for serotype-specific detection of S. suis and is also useful for recombinant production of the proteins. The proteins are then useful for reducing antigens that can be used in vaccines, for controlling or eradicating a Streptococcal disease, in humans or animals, e.g. against S. suis in pigs
                                                                                                                                              amino acid; encodes

The present sequence is an eps operon from Streptococcus thermophilus. Proteins ancoded by the eps operon function in expolygaccharide (BPS) synthesis. The operon is useful for producing chimeric eps operons, for optimising production of BPS in lactic acid bacteria. EPS impart texture, mouth feel and theological properties to fermented food products (e.g. yoghurt). They function as thickeners, to provide free-flowing and texture, and may also have biological activities beneficial to health
                                                                                                                                                       nucleic acid fragments containing exopolysaccharide operon, useful for increasing exopolysacchride synthesis in lactic acid bacteria

The invention relates to a novel strain of a lactic acid bacterium that contains at least one of 8 specific nucleic acid sequences all of which are defined in the specification. The bacterium of the invention may be useful during food preparation particularly that of beverages and meat, cereal, or dairy products e.g. fermented milk, yoghurt, 'matured' cream, dessert cream, cheese, soft cheese, cheese spreads, cottage cheese, milk-based drinks, dairy product retentates and baby milk, where the products are derived from an animal and/or plant. The current sequence is that of the Streptococcus thermophilus CNCM 1-2980 polysaccharide synthesis-related operon DNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   437 TGAATCACATAAACAAATTCAAAAAATCTTGTTGCATTGGTAGTTTTAGGTACAGAAAT 496
                                                                                                                                                                                                                                                                                                                                  New strain of lactic acid bacteria, useful for preparation of foods and pharmaceuticals, especially fermented dairy products, contains genes involved in polysaccharide biosynthesis.

                                 The invention relates to a protein having betal,3-galactose transferase activity, derived from a microbe having an activity of transferring galactose to N-acetyglucosamine by betal,3-bond. The protein can be used in a method for the preparation of a protein having betal,3-galactose transferase activity in which the above transformant is cultured in a medium to form and accumulate a protein having betal,3-galactose transferase activity, and in a method for the preparation of a galactose containing gluside in which a culture liquid of the above transformant or a treated product of the culture liquid of the above transformant or a treated product of the culture liquid of the above transformant or made to be present in an aqueous medium, and a galactose-containing gluside is formed and accumulated in the aqueous medium. The galactose-containing gluside is used as a candidate for infection preventors. This sequence represents DNA encoding betal,3-galactose transferase proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  .035 aktaccaaatacaagatattattaatgacattgaagcaatgggagtgattgtcaatgtta 1094

regular activation by receptors specific for lipid-based tumour associated antigen. The receptor has cytostatic and antimicrobial properties and is suitable for use in gene therapy. The receptors, methods and compositions are useful for treating a neoplastic disease or tumour (cancer), and infectious diseases. This sequence represents a moiety, the DNA of which can be transfected into a cell surface moiety, the DNA of which can be transfected into a cell with superantigen DNA to generate antitumour immunity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      TGGTATACCTATTTAACGTAATTATTAAGCAGTTTAAGGATAGCTTTCTATTTTCGACAA 372

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Streptococci (GBS) Streptococcus agalactiae capsular polysaccharide synthesis (cps) gene in sample. The invention is useful for detecting Sagalactiae in a sample. The present sequence is S. agalactiae cps gene. This sequence is used to illustrate the method of the invention.

This invention relates to a novel method of typing a group B streptococcus (GBS) bacterium which comprises analysing the nucleotide sequence of one or more regions within the cpsh. cpsk, cpsk, cpsk and/or cpsl/M genes of the bacterium, where the regions comprise one or more nucleotides having sequences that vary between types. The method is useful for preparing a composition for serotyping and/or subtyping a GBS bacterium for diagnosing GBS infections in pregnant women, elderly and/or immunocompromised patients. The present sequence is that of a consensus DNA sequence for the 3' end of the cpsD-cpsE-cpsF and the 5' end of the cpsG sequences of group B Streptococci which is related to the method of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        312
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 132

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This sequence represents a fragment of the EPS plasmid derived from L. lactis subspecies cremoris Ropy352. The EPS plasmid is about 32 kb in size and encodes at least 13 active genes plasmid is about 32 kb in size and encodes at least 13 active genes plasmid is about 132 kb in size and encodes at least 13 active genes allow the bacteria to produce an exopolysaccharide, designated EPS352. When EPS352 is expressed in or added to milk, it imparts highly very thick, with a very smooth mouth-feel, and slightly sweet with an obvious chewable-bite. Open reading frames (ORF's) M and N show homology or oflycosyltransferase involved in EPS352 biosynthesis. L. lactis accession number NRRL B-30229. EPS352 is useful for thickening a liquid accession number NRRL B-30229. EPS352 is useful for thickening a liquid in and a fruit-juice. It is also useful as an additive in pharmaceutical products, beauty care products and coating agents. It is pharmaceutically, in the specification that there is an additional ORF between those encoding EpsE and Eps0. This encodes EpsF (AAB47425). However, this ORF is not indicated on the actual DNA sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         3578 TATATTTTGAAATTTAGAACAATGATTCTTAATGCCGAGCA--GTATCTAGAACTTAATC 3635

The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, Pseudomonas aeruginosa and Enterococcus faecalis. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins, and to obtain antibodies capable of binding to the expressed proteins. The proteins can

be used to screen compounds in rational drug discovery programmes. The antiennse mucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence encodes an essential prokaryotic cellular proliferation protein. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the printed specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             146

cencoding a Streptococcus pneumoniae ADR91366polypeptide, or its fragments, with any of 9 fully defined sequences (appearing as ADR94308, ADR94899, ADR94800, ADR94801, ADR94801, ADR94801, ADR94802, ADR95642, ADR95642, ADR95682, ADR96409, or any of the fully defined sequences appearing as ADR91705, ADR91986, ADR919197, ADR92234, ADR93039, ADR93079, ADR92366, ADR92650 or ADR931476 or at least 40 or 30 consecutive nucleotides of the nucleotide sequence. The nucleic acids and proteins are chosen from 5206 disclosed sequences. The nucleic acids and proteins are chosen from 5206 disclosed sequences. Also included are a recombinant expression vector comprising the isolated nucleic acid cited above operably linked to a transcription regulatory element, a cell comprising the recombinant expression vector and a probe sequences as cited above. The methods and compositions of the present invention are useful for the dispnosis, prevention and/or treatment of protecting and protecting from bacterial infection by the present invention are useful for the dispnosis, prevention and/or treatment of the present are accompliant and protecting are useful for the dispnosis, prevention and/or treatment of the present and a protection and conditions resulting from bacterial infection by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            'n,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     433

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    5245 CCCTTGAATTTATGAGTAAGGGTGAAAACGTATCCAACAATTGGGTCCTTTCAAAGTTG 5304
                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is an eps operon from Streptococcus thermophilus. Proteins encoded by the eps operon function in exopolysaccharide (BPS) synthesis. The operon is useful for producing chimeric eps operons, for optimising production of BPS in lactic acid bacteria. EPS impart texture, mouth feel and theological properties to fermented food products (e.g. yoghurt). They function as thickeners, to provide free-flowing and creamy texture, and may also have biological activities beneficial to health
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            312
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               612
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   732
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               72
                                                                                                                                                                                                                          nucleic acid fragments containing exopolysaccharide operon, useful for increasing exopolysacchride synthesis in lactic acid bacteria.

The operon contains 10 open reading frames, and encodes enzymes (eps1, eps2, eps3, eps4, eps5, eps6, eps6, eps8, eps9 eps10) that are involved in the biosynthesis of exopolysaccharides (BFS). The enzymes catalyse the formation of specific intersugar bonds. The enzymes catalyse a process that includes at least one step of forming a bond (in alpha or beta anomeric form) between C1, carrying the reducing a baldenyde group of an activated D-Galp (galactose in pyramose form), and a phosphate group on a lipophilic or proteinaceous primer. The enzymes are used to produce BPS that have antitumor or probiotic properties or are
                                                                                                                                                                                                                                                                                                                                                                                                                                  CDS, minus the termination (claim 6)"

The present sequence encodes enzymes involved in the biosynthesis of exopolysaccharides (EPS). These enzymes are designated EPS1-EPS10. and are encoded by open reading frames eps1-eps10. The enzymes are isolated from Streptococcus thermophilus strain Si139. The proteins are used in a method for the synthesis of EPS, which includes at least one step of forming a bond (alpha or beta-isomer) between C-1 (carrying the reducing aldehyde function, of an activated D-galactose pyranose), and a phosphate on a lipophilic or proteinaceous primer. Stepwise synthesis of EPS occurs with, in each step, addition of a new sugar unit, through its hemi-acetyl function, to an alcoholic hydroxyl of a second sugar unit, present at the cond of a chain of sugar residues bonded to the primer. EPS1 to EPS4 are used to elongate the EPS chain, and to regulate EPS production, EPS5 creates new bonds between saccharides, EPS6 is used in the biosynthesis of EPS, EPS7 and EPS8 are beta-glycosyltransferases, EPS9 is a transporter of repetitive units, and EPS10 catalyses the conversion of a pyranose form of a beta-D-galactose to the furanose form. The EPS enzyme or properties of foods, particularly fermented milk proporties.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New recombinant enzymes for synthesis of exopolysaccharides, particularly in lactic acid bacteria, for improving properties of fermented milk
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            products such as yoghurt and cheese, e.g. their organoleptic properties and flavour stability

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is an eps operon from Streptococcus thermophilus. Proteins encoded by the eps operon function in exopolysaccharide (EPS) synthesis. The operon is useful for producing chimeric eps operons, for optimising production of EPS in lactic acid bacteria. EPS impart texture, mouth feel and rheological properties to fermented food products (e.g. yoghurt). They function as thickeners, to provide free-flowing and creamy texture, and may also have biological activities beneficial to health
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New nucleic acid fragments containing exopolysaccharide operon, useful e.g. for increasing exopolysacchride synthesis in lactic acid bacteria

                                                                                                                                                                                                                                                                                                   5961
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence is an eps operon from Streptococcus thermophilus. Proteins encoded by the eps operon function in exopolysaccharide (EPS) synthesis. The operon is useful for producing chimeric eps operons, for optimising production of EPS in lactic acid bacteria. EPS impart texture, mouth feel and theological properties to fermented food products (e.g. yoghurt). They function as thickeners, to provide free-flowing and creamy texture, and may also have biological activities beneficial to health
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New nucleic acid fragments containing exopolysaccharide operon, useful e.g. for increasing exopolysacchride synthesis in lactic acid bacteria.
